С чего всё начиналось...

Асинхронность

AJAX is a developer's dream, because you can:

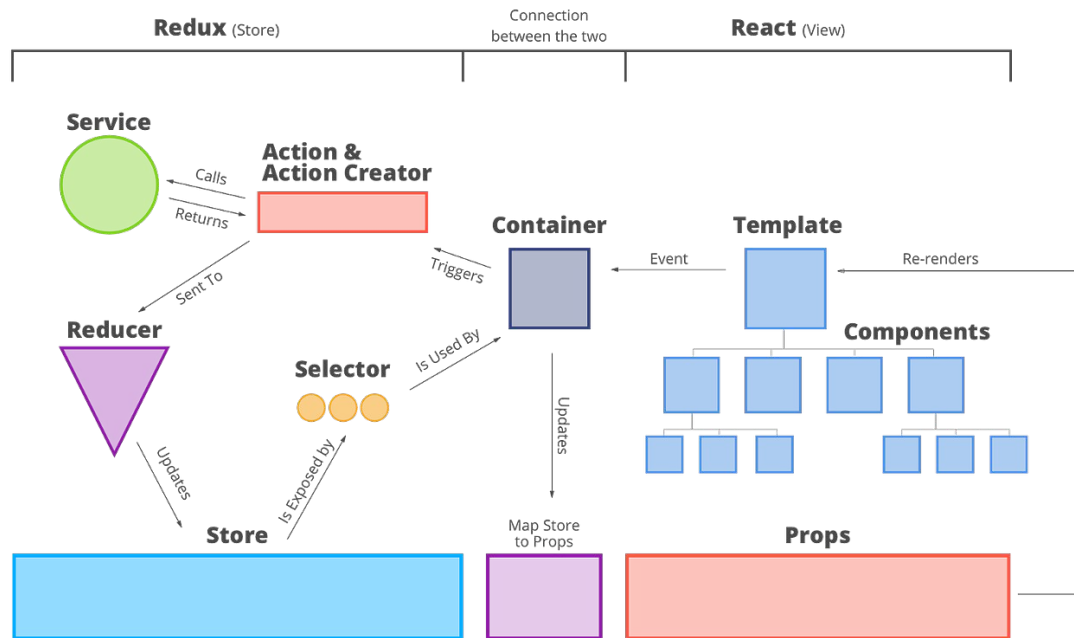

- Update a web page without reloading the page
- Request data from a server - after the page has loaded
- Receive data from a server - after the page has loaded
- Send data to a server - in the background

JQuery AJAX => JS Promise + XMLHttpRequest => Browser Fetch API

State management

- Уменьшение связности
- Повышение тестируемости
- Упрощение манипуляций с визуальными компонентами
- Упрощение поддержки
